

WVHIN Technology Committee Report January 2007

1. A potential membership roster is being developed. Suggestions for nominees to the committee may be sent to Chris Clark at the Health Care Authority.
2. A Web site for the WVHIN is being developed by WV Office of Technology staff. The site will include such features as a web portal containing a Content Management System with the following features: a document library; a presentation library; calendars; and secure, controlled access for designated users to post and collaborate on documents. The system is expected to be operational within the next thirty days.
3. Research materials on e-prescribing and vendor solutions have been gathered by staff and potential vendor contacts are being established in anticipation of legalization of e-prescribing in West Virginia and possible support of implementation efforts.
4. Information and contact lists from other vendors of Health Information Network technologies are also being collected. Inquiries from potential vendors may be directed to Chris Clark at the Health Care Authority.
5. HCA staff members are also assisting a group of providers in generating a grant application for the FCC Rural Health Pilot project. A separate presentation to the Board by provider representatives is on the agenda.

Kyle Schafer, Chair /s/
